Role of eIntervention for OQPIC

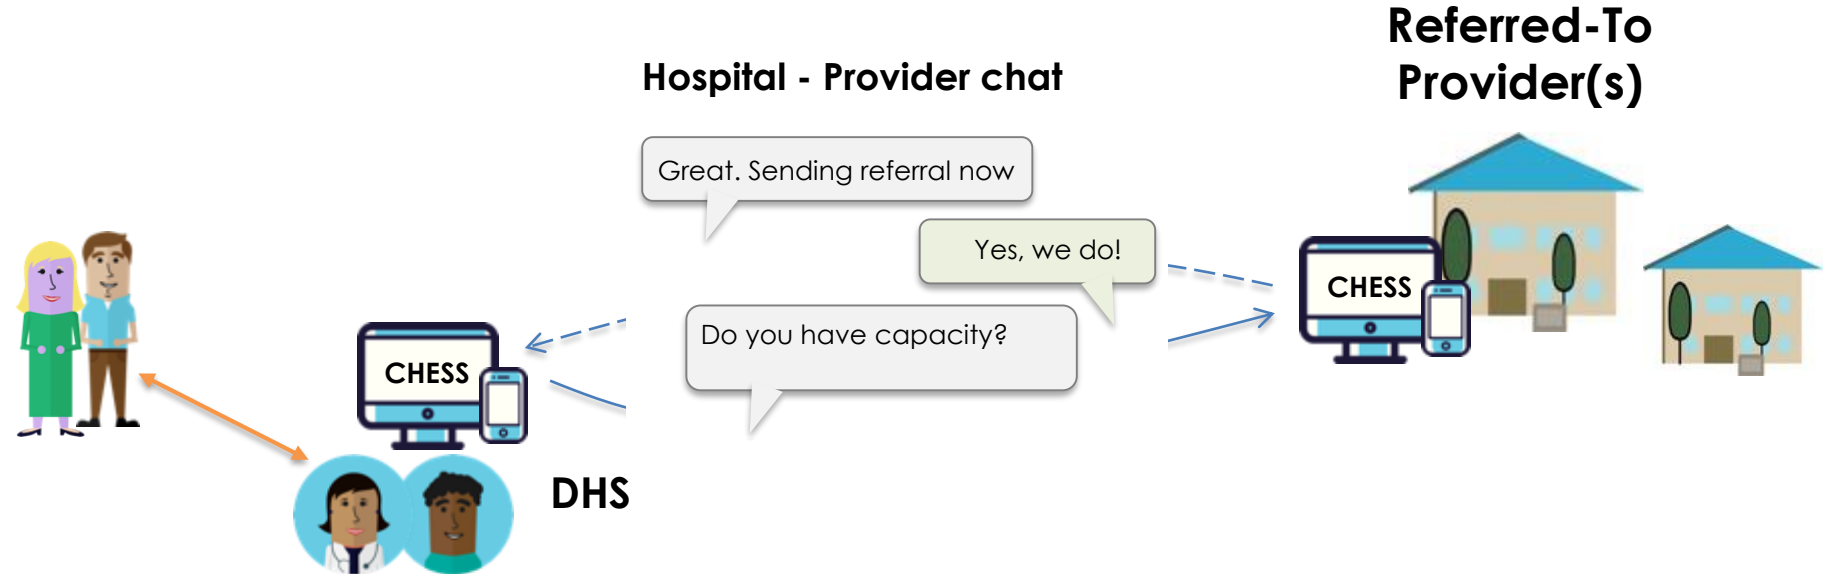

Help pregnant women with SUD get evaluated and treated for their addiction

- ➔ **eIntervention platform** for **making referral, tracking referral, connecting all parties**, providing analytics on referral success, and alerting when if the patient doesn't show
- ➔ **eIntervention** can also be used to connect the women with **non-treatment resources** in the community
- ➔ The **Envoy App** keeps the patient connected during the transition and can offer video content and support related to her addiction, SUD treatment, pre-natal care, and other community resources available to her
- ➔ If, in the future, there's a program team or peer specialist resource available thru OQPIC or thru a provider, then they could use eIntervention to engage with patient
